

IN PURSUIT OF PROGRESS AND PROFITABILITY

Recognizing Western Canada’s Leading Pro\$ Herds

Lactanet is pleased to recognize western Canadian herds and cows that excel in various metrics of performance and profitability. In this feature, Lactanet presents the top herds in Western Canada for Pro\$.

Pro\$ is the Canadian economic selection index that maximizes genetic response for cow lifetime profitability. It reflects real-world profitability by using yearly updated economic values based on your cows and current market conditions. It accounts for changes in the pricing of milk and its components that affect each cow’s revenue as well as feed, maintenance, and rearing costs that affect expenses for dry cows, lactating cows and

heifers. To reflect a measure of lifetime profitability, the Pro\$ calculations consider each cow’s revenue and expenses up to 6 years of age or disposal if removed from the herd earlier. This gives every animal the opportunity to demonstrate its ability to remain productive across multiple lactations.

Pro\$ is expressed in dollars as a deviation from breed average, meaning a sire with a Pro\$ of 0 is expected to produce daughters that have an average accumulated profit to 6 years. Selecting for higher Pro\$ sires will produce more profitable daughters.
